Tolerance on Length	Up to 3/4 in., incl.: -0.03	Over 3/4 to 1-1/2 in., incl.: -0.05	Over 1-1/2 in.: -0.06

Description	A thread cutting screw with machine screw thread pitch, blunt point, tapered entering threads and multiple cutting edges.
Applications/ Advantages	Steel thread-cutters are used in heavy gauge sheet metal, aluminum, zinc and lead die castings, cast iron, brass and plastic. Stainless screws offer additional resistance to corrosion, 18-8 moreso than 410. When using any thread-cutting screw, the material in which the threads are cut should have a lower hardness by at least 10 to 20 Rockwell hardness points.
Material	**Steel**: AISI 1016 - 1024 or equivalent steel. **Stainless**: 410 martensitic stainless steel or 18-8 stainless steel.
Heat Treatment	***Steel***: Screws shall be quenched in liquid and then tempered by reheating to 650°F minimum. ***410 SS:*** An ideal method of hardening 410 stainless screws is a bright hardening process, which typically involves a vacuum furnace. Another key factor affecting hardness is the chemistry of the fastener--most elements have maximum values but not minimums. This fact can contribute to hardness variance. 18-8 is only hardenable by cold-working.
Surface Hardness	**Steel**: Rockwell C45 minimum
Case Depth (steel)	No. 4 thru 6 diameter: .002 - .007 No. 8 thru 12 diameter: .004 - .009 1/4" diameter & larger: .005 - .011
Hardness	**Steel (after tempering)**: Core: Rockwell C28 - 38 **410**: Rockwell C38 - 46 (approx.); **18-8** Stainless: Rockwell B90 - C20 (approx.)
Plating	See Appendix-A for information on plating of steel thread cutting screws.
